

**WORLD LEADER IN
CONTACT CLEANING**

teknek

CASE STUDY ARTICLE

Eltos (Italy)

Eltos is one of Italy's leading PCB manufacturers specializing in double side and multilayer boards (up to 32 layers).

The company was established in 1980, has revenues of 12m euros and employs 95 employees between two facilities in Arezzo, Tuscany.

High quality standards and zero defects are two cornerstone's of the company's success and Teknek has played a significant part in achieving this.

For the past 15 years, Eltos has used Teknek's contact cleaning equipment to remove dust from PCBs before they enter the production process.

When choosing contact cleaning equipment they had considered other competitors and other Italian distributors. Although the Teknek "clean machines" were more expensive, the company felt that it would offer better performance and last longer.

"We have found that our yields have improved dramatically and there is substantially less rework since installing the Teknek equipment," said Alessandro Biserni, Technical Manager of Eltos.

He added: "Not only have we saved considerable time through reducing rework but we have saved money by not having to scrap faulty boards."
